Information and consent form on preoperative stereotactic-guided wire localization

— Dear Patients,

Please carefully read all the information about the examination process, your tasks, and possible adverse effects.

— General information

This type of examination is always done as **an additional test after** the initial mammography and is always indicated by a physician. The examination includes some radiation exposure.

A nonpalpable lesion in your breast is planned to be surgically removed and it is necessary to localize this lesion for the operating surgeon.

When visiting, please bring your previous breast-related reports, final reports, films, and CDs, and provide them to the receptionist or assistant.

The marking scheduled for the day of surgery, so you must follow the instructions for preparing for surgery.

— Examination procedure

The lesion confirmed during prior examinations will be marked by a radiologist under stereotactic guidance using a special thin wire marker. The procedure is performed in the mammography room under the supervision of a specialist, in a sitting or lying position, with X-ray guidance. The breast is under compression throughout the procedure. No anaesthesia is required because, after its insertion, the thin needle is guided into the correct position, it is removed and only the thin, flexible wire remains in the breast, which will be later removed during surgery together with the lesion it localizes.

Two X-rays are then taken to check the position of the wire.

The wire is secured to the skin with a sterile cover bandage.

— Possible hazards, adverse effect and their avoidance and prevention

It is possible that more than one wire may be required for accurate localization or the placement of the first wire will not be in the appropriate position, and several punctures might be required. It comes with no additional risk to you because all the wires will be removed during the operation. Mild bleeding might occur at the site of needle insertion, but it will not cause any problems during the operation.

For any additional questions, feel free to ask the medical personnel performing the examination or the specialist overseeing it!

Like any diagnostic examination, preoperative stereotactic guided wire localization requires your consent as per the law on health. Without your signature on the informed consent, the examination cannot be performed.

— **Thank you for your cooperation, we wish you good health.**

Please fill out with printed capital letters.

Examination questionnaire

Please answer the questions below, marking your answer with an X using the check box.

Are you pregnant?

Yes/ It is possible No

Please note that if the answer is Yes/It is possible, you have to fill out the relevant pregnancy questionnaire & consent form before undergoing an examination that involves radiation.

Do you have haemophilia?

Yes No

Are you taking anticoagulants?

Yes No

Do you have alcohol or Lidocaine sensitivity?

Yes No

Do you have any other drug sensitivities?

Yes No

Do you have an infectious disease?

Yes No

Consent form

I, the undersigned, hereby declare that I have been fully informed both in written and verbal form, especially about the nature, purpose and steps of the procedure in a way that I can understand. I have also been informed about the possible complications, benefits and risks of a missed examination, and my rights about consenting to the examinations and interventions.

I was given the opportunity to ask further questions, my questions about the procedure (if I had any) were answered to my satisfaction, and I understand what was said. I was given the opportunity to learn the name, qualification and position of the personnel directly involved in the procedure. I have no further questions and I do not need further time to think. I have been given sufficient time to make my decision and I give my consent under no duress and of sound mind.

I understand the nature of the examination and agree to the preoperative stereotactic guided wire localization.

Signature of the patient (or legal representative)

If the PATIENT CANNOT MAKE A STATEMENT AND/OR SIGN on their own behalf, the reason for this

- Minor (under the age of 18) Vulnerable adult (diminished capacity/incapacitated)
 Other - please specify

Full name of legal representative

(Please completed with legibly, printed letters.)
